Title - A World suffocating in Plastic

A World Suffocating In Plastic

There is enough plastic thrown away each year to circle our world four times. In America, 25% of plastic is recycled, if we recycled the other 75%, we could save 10 billion gallons of oil and 44 billion cubic meters of plastic each year. If we want to break the earth out of its plastic prison, we need everyone to use reusable bags, metal straws, and to recycle.

We need to make more people in the world aware of this increasing problem. We must do more to save a world suffocating in plastic. There is no planet B.
